

Section	Description	Marks Available	Marks Received
Introduction	Provides background information about abiotic factors and their importance.		/5
	- Provides a definition of abiotic factors	1	
	- Provides examples of abiotic factors	1	
	- States that abiotic factors	1	
	Relates the information to ecosystems		
Independent Variable	- States that abiotic factors can influence species distribution	1	
	- States that abiotic factors can be limiting factors.	1	
Dependent Variable	- Correctly names the independent variable	1	/2
	- Correctly names the units for the independent variable	1	
Controlled Variables	- Correctly names the dependent variable	1	/2
	- Correctly names the units for the dependent variable	1	
Hypothesis	Correctly names at least three controlled variables	3	/6
	- Answers can include type of tests performed at each site, consistent data collection methods, same time of year, similar weather conditions.		
Method	States how each variable is controlled		
	- Answers can include: ensuring each method is followed closely, completing field work at similar times, using the same brand test kits.	3	
Diagram	Includes independent variable in hypothesis	1	/2
	Includes dependent variable in hypothesis	1	
Results (Table and Notes)	Lists all materials, including quantities	2	/5
	Creates a numbered, repeatable list of instructions for conducting this experiment	2	
	Method section includes strategies for minimising uncontrolled variables and other factors.	1	
Diagram	Includes fully labelled diagram	1	/2
	Diagram drawn in pencil	1	
Results (Table and Notes)	Records raw data using required number of tables		/9
	- Water chemistry - Baywater	1	
	- Water chemistry - Point Walter	1	
	- Diversity and abundance of macroinvertebrates - Bayswater	1	
	- Diversity and abundance of macroinvertebrates - Point Walter	1	
	Includes dependent and independent variable labels in each table	4	
Results (Table and Notes)	Identifies outliers in the raw data	1	

Graph	Completes all required graphs -		
	- <i>Water temperature</i>	1	
	- <i>Turbidity</i>	1	
	- <i>Dissolved Oxygen</i>	1	
	- <i>Salinity</i>	1	
	- <i>pH</i>	1	
	- <i>Phosphates</i>	1	
	- <i>Nitrates</i>	1	
	- <i>Species Abundance</i>	1	
	- <i>Species Diversity</i>	1	
	Includes an appropriate title for each graph stating dependent and independent variables - <i>accept variations of "graph of VARIABLE at Bayswater and Point Walter"</i>	9	/49
	Correctly labels all axes	1	
	Includes units with labelled axes	1	
	Uses correct type of graph	9	
	- <i>column graph</i>		
	Correctly plots points on the graph	9	
	Pencil and Ruler	1	
Discussion	Describes patterns and trends in the data		
	- <i>Identifies similarities and differences in raw data between sites</i>		
	- <i>Identifies patterns/inconsistencies between sites</i>		
	Accurately relates the patterns observed in the data to the hypothesis.		
	- <i>states whether their hypothesis was supported or not</i>		
	- <i>provides a reason to support this.</i>		
	Uses questions to form paragraphs rather than simple answers.		
	Relates findings to the effect of abiotic factors on water quality and species diversity and abundance.	4	
	- <i>Provides a reason why the following may affect species diversity and abundance:</i>	2	/17
	- <i>pH</i>	1	
	- <i>Water temperature</i>	10	
	- <i>Salinity</i>		
	- <i>Dissolved oxygen</i>		
	- <i>turbidity</i>		
	- <i>Phosphates</i>		
	- <i>Nitrates</i>		
	- <i>land use</i>		
	- <i>human activity/infrastructure</i>		
	- <i>Geography</i>		

Evaluation	Comments on the reliability and validity of the data collected	2	/8
	Comments on the reliability of the way in which data was collected	2	
	Describes at least two limitations with the experiment that may affect the accuracy of the data	2	
	Suggests at least two improvements for the experiment in the future	2	
Conclusion	Summarises findings from the investigation	1	/3
	Comments on whether the outcome of the investigation was valid	1
